Herencia Resources

**Herencia Resources receives further high grade drilling results at Paguanta**

LONDON (Thomson Financial) - Herencia Resources Plc. said it has received further high grade drilling results at the 'Patricia' deposit, part of its 70-percent owned Paguanta zinc-lead-silver project in northern Chile.

The company said the latest drill results are some of the highest grades and thickest intercepts reported to date from the Cathedral Vein.

'The drilling shows that the mineralization remains open at depth and highlights the strong resource potential and very attractive grades of our Paguanta project,' the company added.
