Herencia Resources Climbs on New High Grade Drilling Results at Paguanta Project

Herencia Resources Plc, the exploration and development company with a primary focus on identifying resource opportunities in South America, has announced further high grade drilling results at the 'Patricia' deposit, part of its 70% owned Paguanta zinc-lead-silver project in northern Chile.

Herencia has confirmed high grade mineral returns from both the Cathedral and Rosada Veins.

The latest diamond drilling of the Cathedral Vein has returned significant widths of high grade mineralisation at depth. Two drill holes, PTDD024 and PTDD026, located approximately 130m apart appear to have discovered a zinc rich extension to the Cathedral Vein. The vein intersection indicated by PTDD024 has an interpreted true width of 8 to 10m. Three samples of 0.5m width greater than 30% zinc were returned.

Diamond hole PTDD026 intersected two distinct veins, separated by a stockwork zone and totalled approximately 34m true width. The holes intersected the Cathedral Vein 160m and 210m respectively, vertically beneath the outcropping mineralization. Three samples of 0.5 width greater than 1,500ppm Ag were returned.

The Cathedral Vein continues to return high-grade intersections over approximately 300m of strike length, with the deepest visible mineralisation now intersected at a vertical depth in excess of 250m.

The Rosada Vein has been confirmed from recent diamond drilling which returned intercepts of high grade mineralisation at a relatively shallow depth of approximately 25m in PTDD025 and approximately 50m in PTDD020, located 25m vertically apart on the same drill section.

Executive Director, Michael Bohm said: "We are very excited about the latest drill results as they are some of the highest grades and thickest intercepts reported to date from the Cathedral Vein. The drilling shows that the mineralization remains open at depth and highlights the strong resource potential and very attractive grades of our Paguanta Project."

Shares in Herencia Resources are currently up 15% on the positive update.

by the end of November 2008.
