Natural resources

Chromex Mining, which develops chromite mining and processing facilities, has more than doubled its resource estimate for its Stellite mine in South Africa to 31.9 million tonnes of chromite. It said it now controls more than 40 million tonnes of chromite.

Minera IRL said it had recovered all capital and pre-development costs for the Corihuarmi gold mine in Peru in less than seven months after start-up. The company said its sales from 37,864 fine ounces of gold and 5,899 fine ounces of by-product silver was \$33.6 million (£19.6 million) to the end of September.

Herencia Resources, the mineral explorer and developer, said the total mineral resource tonnage at its Paguanta project in northern Chile has increased by 26 per cent.
