Herencia Resources

 **Herencia - high grades at depth at Paguanta**

Tuesday, August 19, 2008, 01:48 PM

Herencia Resources (AIM: HER) an exploration and development company focused on resource opportunities in South America, informed the market that drilling at the Patricia deposit (part of its 70% owned Paguanta zinc-lead-silver project in northern Chile) continues to yield positive results.

Approximately 8,800 metres, of the 10,000 metre diamond and reverse circulation drilling program at Patricia is complete, and assay results have been positive to date with high grade intercepts recorded in all veins. Drilling at Central (hole PTDD015) and Cathedral veins (hole PTRC079) have both revealed high grade mineralisation at depth.

Recent operational highlights include recognising that mineralised veins extend with high grades at depth at Patricia, the start of drilling at La Rosa porphyry-copper prospect, and appointing Golder Associates to undertake scoping study which is expected to be complete by the end of November 2008.
