Herencia Resources Reports Positive Metallurgical and Drilling Results

2 July 2008

International Resource News

Herencia Resources Plc (AIM: HER), a UK-based company that explores for mineral resources, has announced positive metallurgical test work and drilling results from the Paguanta zinc-lead-silver Project in northern Chile.

Positive preliminary metallurgical test work has shown results like an 80% Zinc recovery, 70% lead recovery, and 85% silver recovery from around 300kg of metallurgical samples tested from the project. The drill results include intersecting the Cathedral vein and returning 4.5m grading 8.04% Zn, 1.40% Pb and 74ppm Ag.

The company executive director, Michael Bohm, said, 'We are very pleased with the initial metallurgical results as they have positive implications for ensuring a simple design of any processing circuit at Paguanta. This would keep the capital and operating costs of the project down. It is also encouraging to see all of our main veins continuing to return mineralized drill intercepts, whilst remaining open at depth.'
